

INTERNATIONAL APPLICATION PUBLISHED UNDER THE PATENT COOPERATION TREATY (PCT)

(51) International Patent Classification 6 : G06F 17/22		A1	(11) International Publication Number: WO 97/10556 (43) International Publication Date: 20 March 1997 (20.03.97)
(21) International Application Number: PCT/US96/14667		(81) Designated States: AL, AM, AT, AU, AZ, BA, BB, BG, BR, BY, CA, CH, CN, CU, CZ, DE, DK, EE, ES, FI, GB, GE, HU, IL, IS, JP, KE, KG, KP, KR, KZ, LC, LK, LR, LS, LT, LU, LV, MD, MG, MK, MN, MW, NO, NZ, PL, PT, RO, RU, SD, SE, SG, SI, SK, TJ, TM, TR, TT, UA, UG, US, UZ, VN, ARIPO patent (KE, LS, MW, SD, SZ, UG), Eurasian patent (AM, AZ, BY, KG, KZ, MD, RU, TJ, TM), European patent (AT, BE, CH, DE, DK, ES, FI, FR, GB, GR, IE, IT, LU, MC, NL, PT, SE), OAPI patent (BF, BJ, CF, CG, CI, CM, GA, GN, ML, MR, NE, SN, TD, TG).	
(22) International Filing Date: 13 September 1996 (13.09.96)			
(30) Priority Data: 08/527,438 13 September 1995 (13.09.95) US 08/527,827 13 September 1995 (13.09.95) US 08/527,837 13 September 1995 (13.09.95) US 08/527,831 13 September 1995 (13.09.95) US			
(71) Applicant (for all designated States except US): APPLE COMPUTER, INC. [US/US]; 1 Infinite Loop - MS: 38-PAT, Cupertino, CA 95014 (US).		Published With international search report. Before the expiration of the time limit for amending the claims and to be republished in the event of the receipt of amendments.	
(72) Inventors; and (75) Inventors/Applicants (for US only): EDBERG, Peter, K. [US/US]; 1892 Fairmount Boulevard, Eugene, OR 97403 (US). McCONNELL, John, I. [US/US]; 222 McKendry Drive, Menlo Park, CA 94025 (US). TANG, Yung-Fong, Frank [CN/US]; Apartment #8, 175 E Homestead Road, Sunnyvale, CA 94082 (US). DANIELS, Andrew, M. [US/US]; 123 Haight Street, Menlo Park, CA 94025 (US).			
(74) Agents: CARMICHAEL, Paul, D. et al.; Apple Computer, Inc., 1 Infinite Loop - MS: 38-PAT, Cupertino, CA 95014 (US).			
(54) Title: UNICODE CONVERTER			
(57) Abstract			
<p>Code conversion and/or truncation processing systems and techniques that provide round trip fidelity, while ensuring that the resulting character codes are interchangeable with other platforms, that take direction and/or context into consideration when converting characters from a source character encoding to a target character encoding is disclosed, and that ensures that a source string received for conversion is accurately converted into a different target character encoding even when the source string received for conversion is accurately converted into a different target character encoding even when the source string exceeds the length of an input buffer which holds the source string for conversion. The code conversion system is able to map a single source character or a sequence of characters to either a signal target character or a sequence of target characters. With round trip fidelity, source text can be converted to target text and then back again to the original source text, ensuring interchangeability by maximizing the use of standard target characters and minimizing the use of private characters. The code conversion is particularly useful for converting to/from Unicode characters from/to other character sets. By determining or resolving the direction of the characters being converted and/or by determining the context of the characters, the code conversion system can then utilize the determined or resolved direction of the characters to ensure that the correct mapping to the target character encoding is obtained. The truncation processing technique operates to truncate a portion of the source string held in the input buffer so that the truncated portion is able to be converted to the target character encoding without being affected by subsequent characters in the source string.</p>			
<pre> graph TD SA[STATE ADMINISTRATOR] --> B[BUFFER] B --> FUC[FROM-UNICODE CONVERTER] FUC --> TS[TARGET STRING] FUC --> TR[TRUNCATOR] TR --> S[SCANNER] S --> ST[SCANNER TABLE] S --> LH[LOOKUP HANDLER] LH --> MT[MAPPING TABLE] FBH[FALBACK HANDLER] --> MT </pre>
